

Introduction

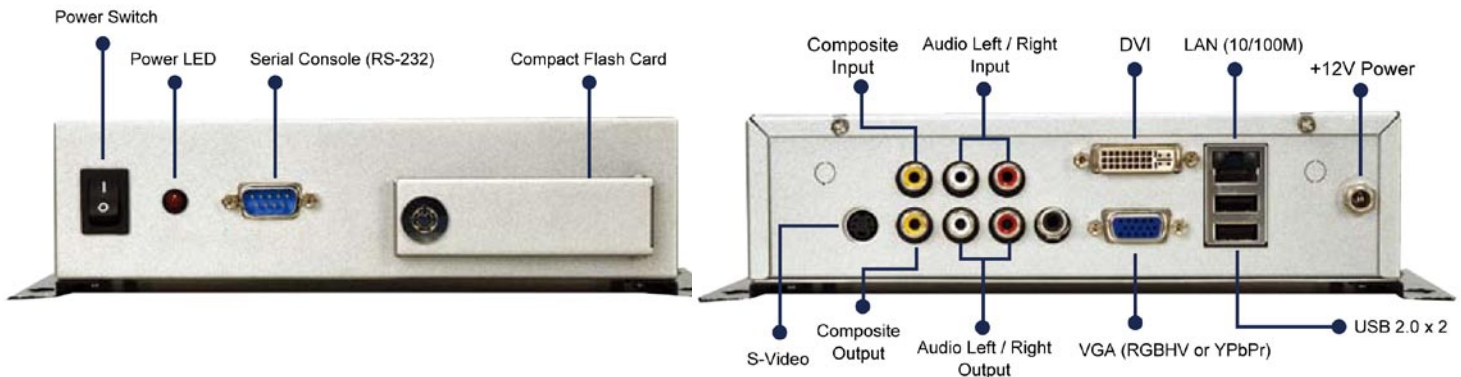

The NDSP-500 Digital Signage Player is a multimedia device that allows you to design and show dynamic audio and video content to your target audience on all types of displays. You can update your advertisement anytime, anywhere over a LAN or Wireless Network. It is equipped to organize high-quality video, audio, graphics, flash, and scrollable banners on a wide range of displays using DVI, AV-video, S-video, VGA, or component video. The graphic interface and design software allows you to quickly create displays with multiple display zones each with its own schedule, customize playlists, and multiple schedules for the player.

Features

- Compact Fanless Player perfect for harsh or outdoor applications
- Auto play after power on
- Real time Video/Audio Inputs
- Built-in WIFI (NDSP-500WL)
- Supports Multiple formats
- Fully programmable display zones that can show different contents simultaneously, including graphics, real time or recorded video, scrolling messages, audio, and current time.
- Flexible zone/display scheduling
- Easy to use graphical drag and drop design software
